

Evaluation inventory follows the nine-stage Assays Roadmap

Coverage is broad by stage count, but several covered stages remain single-source dominated.

70 evals

7/9 stages covered

S7 build gap

Stage	Evals	Status	Roadmap interpretation
S1 Disease / model characterization	 0	Deferred	out of v1 scope
S2 Primary screening & hit confirmation	 7	Diversify	PRISM-heavy
S3 Drug response / pharmacogenomics	 11	Diversify	mostly PRISM
S4 Human genetic target support	 0	Deferred	GenomicsBench
S5 Causal target validation	 12	Ready	v1 coverage
S6 Perturbational MoA / PD	 17	Ready	strongest coverage
S7 Compound-target characterization	 1	Build	largest gap
S8 Developability & safety	 16	Diversify	cardiotox-heavy
S9 Translational efficacy	 6	Diversify	one NSCLC source

Counts and statuses are from the Assays Roadmap coverage mapping. S1 and S4 are intentionally deferred for this release.
