

Evaluation inventory follows assay evidence, not a generic drug-discovery checklist

Dataset	Assay evidence	Approx. evals	Decision tested
DM decryptM	dose-resolved phosphoproteomics	 48	MoA / pathway readouts
DE decryptE	dose-resolved expression proteomics	 12	MoA + target reliability
KB Kinobeads	chemoproteomics target engagement	 2	direct target selection
TG TG-GATEs	in vivo rat toxicogenomics	 20	safety / tox calls
PK PK/ADMET	curated ADMET, DMPK, PK	 45	free exposure + source choice

Counts are approximate where the planning documents specify a target range. Replace with finalized inventory counts after task freeze.
